- Full Screen CG-3D Objects
- Device Control
- SDI and HD
- And more...

Voyager, our new Broadcast in a Box "All in One Solution", provides small stations and stations on a tight budget with a feature-rich "turnkey" solution for station management. This system provides full featured playback software along with decoding and optional encoding to simplify your workflow and save time "to air". Voyager includes:

- ◆ One NTSC composite video and two balanced or unbalanced stereo audio outputs. Expandable to three channels without chassis expansion.
- ◆ Storage for 150 to 700 hours of MPEG2 programming without chassis expansion.
- ◆ Automation software includes:
  - ◆ Easy to Use Video Catalog
  - ◆ Drag 'n Drop, Block, Copy and Paste Scheduling
  - ◆ Conflict Resolution, Missing Media Flags
  - ◆ Time Gap Alert with Fill Options
  - ◆ Customizable Operator's Screen
  - ◆ Remote Access and Report Software
  - ◆ Error Notification Program and more...

Don't compromise on features. This is not an appliance but a fully expandable solution. Synergy Broadcast offers our full-featured automation software and provides you with a migration path for the future that includes encoding, file transcoding, server expansion, additional software features, web streaming, video on demand, archiving and much more. You can start small and expand your system over time. Future-proof your technology migration with Synergy Broadcast Systems by starting with Voyager.

Synergy Broadcast has been providing solutions for cable broadcasters for over 15 years. We provide systems that are engineered for each customer's specific needs and applications. Our "turnkey" solution means you can depend on a single company for the major hardware and software components you need as well as training and support to get your system installed and operational.
